REMARKS

25X1A

Verkhoturys (58-53N 60-43E) is 145 miles north of Sverdlovsk on the single-track railroad (Route 454)\* leading from Nizhniy Tagil north to Serov.

As shown on the accompanying line drawing, the relatively minor rail facilities include the following: rail yard six to eight tracks wide, 3,400 feet long; locomotive or car repair shop, 210 by 100 feet, containing four or five stalls; turning wye, effective length, 400 feet; water tank, 20-25 feet in diameter; and a coal-storage yard, 1,000 by 290 feet.

The principal industries in Verkhoturys are related to wood processing. These industries are served by a narrow-gauge logging railroad, with total trackage of approximately 125 kilometers, which leads to extensive logging operations east and northeast of Verkhoturys.

\*Route number is taken from the document cited above.
